ALPHA & OMEGA SEMICONDUCTOR

AOD442/AOI442

60V N-Channel MOSFET

General Description

The AOD442/AOI442 used advanced trench technology to provide excellent $R_{DS(ON)}$ and low gate charge. Those devices are suitable for use as a load switch or in PWM applications.

Product Summary

V_{DS}	60V
I_D (at V_{GS}=10V)	37A
$R_{DS(ON)}$ (at V_{GS}=10V)	< 20mΩ
$R_{DS(ON)}$ (at V_{GS} = 4.5V)	< 25mΩ

100% UIS Tested
100% R_g Tested

A. The value of $R_{\theta JA}$ is measured with the device mounted on 1in^2 FR-4 board with 2oz. Copper, in a still air environment with T_A =25°C. The Power dissipation P_{DSM} is based on $R_{\theta JA}$ and the maximum allowed junction temperature of 150°C. The value in any given application depends on the user's specific board design, and the maximum temperature of 175°C may be used if the PCB allows it.

B. The power dissipation P_D is based on $T_{J(MAX)}$=175°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.

C. Repetitive rating, pulse width limited by junction temperature $T_{J(MAX)}$=175°C. Ratings are based on low frequency and duty cycles to keep initial T_J =25°C.

D. The $R_{\theta JA}$ is the sum of the thermal impedence from junction to case $R_{\theta JC}$ and case to ambient.

E. The static characteristics in Figures 1 to 6 are obtained using <300µs pulses, duty cycle 0.5% max.

F. These curves are based on the junction-to-case thermal impedence which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of $T_{J(MAX)}$=175°C. The SOA curve provides a single pulse rating.

G. The maximum current rating is package limited.

H. These tests are performed with the device mounted on 1 in^2 FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C.
